Holo-Rizon

A holographic wide-screen format

Brand new, spectacular and extra-wide: Holo-Rizon™ displays holographic projections in a wide-screen format. The display, which is almost 80 centimetres wide, opens up new opportunities for holographic presentations. The tool allows various contents to be illustrated next to one another. Because of its shallow depth, the system is ideal for built-in solutions or wall mounting.

Set new standards in lively presentations at the POS, in showrooms or in the gastronomy sector with the Holo-Rizon™. The three-dimensional animations address your consumers and target groups and leave a sustainable impression.

The display can be adapted to individual customer design and branding. We produce the holographic content according to your requests. In doing so, we can also integrate existing material. The display can be combined with interactive technologies or digital signage.

SPECIFICATIONS

Visual angle:	90°
Height:	361 mm
Width:	790 mm
Depth:	304 mm
Weight:	28 kg
